

**ABSTRACT**

The present invention relates to a machine for gathering products such as grass, comprising a main frame bearing a first lateral gathering device with which a first windrowing device is associated and a second lateral gathering device with which a second windrowing device is associated.

It is remarkable in that the main frame additionally bears a central gathering device with which a third windrowing device is associated and in that said central gathering device and said third windrowing device can be moved relative to the frame into a first and a second position.
